

# Samuel Frost — Lab Internship Cover Letter

Me

Studying Chemistry and Molecular Physics I am well suited to an internship focused on materials science.

Materials science lies on the boundary of chemistry and physics, with an emphasis on using modern techniques to develop innovative new materials. Studying Chemistry and Molecular Physics this puts me in a well prepared position to start at the internship. I am familiar with a plethratude (I am an avid neologist) of lab enviroments.

I instructed an after-school class on graphical programming to the younger years whilst doing my A-levels, this taught me how to simplify fundamental ideas to those unfamiliar, whilst enhancing my own programming ability.
